

## **How to create an auto response**

The account user will set the auto response button text and the text that the Telegram user will get once clicks on this button. The account user will also be able to upload an image to be shown with the text to the Telegram user.

## **How to create a form**

The account user will set the form button text.

The account user will set the first text that the Telegram user will get once clicks on the button (An introductory text. The explanation of the form, for example).

Then the account user will be able to create a group of questions that will be shown in order to the Telegram user.

The first question will be prompted just after the introductory text.

The account user will be able to select the type of response expected (plain text or a photo).

There will not be a limit of questions. The questions can be ordered by the account user (drag and drop)

The account user will be able to set the final text that will be prompted once the Telegram user answer the last question.

The account user will be able to set an email account where the result of the form will be received.

Also, the responses will be available in the webapp.

## **How to create a gallery**

The account user will set the gallery button text.

The account user will set the first text that the Telegram user will get once clicks on the button (An introductory text. The explanation of the gallery, for example).

Then the account user will be able to upload photos for this gallery, limited to X photos. With the uploaded photo, the user can write a short text about the photo that will be prompted just after the photo.

The account user can also order the images (drag and drop). The same order in the webapp is the order that will be displayed at Telegram.

The first photo will be shown automatically after the introductory text.

Once the Telegram user gets the last image, if he clicks for the next image he will get the first one (it will work like a circle).
